Price Schedule

The Procuring Entity intends to have a detailed pricing arrangement for Heavy Fuel Oil delivered. Tenders shall be evaluated using the price formula outlined below. The price P in USD per Imperial barrel shall be calculated for each release as per the following formula:

$P = A + B + C$, where

A = F.O.B price calculated in U.S. dollars per Imperial barrel at a temperature of fifty five degrees Celsius (55°C) or One hundred and thirty one degrees Fahrenheit (131 °F) based on three days midpoint rate average around the bill of lading date of the vessel which effected the delivery. The applicable index is Platts Oilgram report, US Gulf Coast HSFO (Platts Reference PUAZ00). In the event that the bill of lading date occurs when Platts is not published, (e.g. non- working days, holidays etc.) the bidder will use the previous two days Platts posting and the next day Platts posting).

B = Ocean Freight (including Ocean losses and Insurance)

C = Bidder's Premium (plus or minus (+/-))

For the purposes of this tender the Supplier should assume that the Procuring Entity will provide waivers of all government taxes related to the shipments of HFO (Excise tax, Custom duties and VAT). This undertaking by the Procuring Entity does not include waivers on any profits earned by the Supplier as a result of the supply of HFO which are taxable in Guyana.

Since Component A of the Pricing Formula is variable and based on the Platts published data, Bidders are only requested to quote their offer in relation to components B and C of the pricing formula for the quantities set out in the Delivery Schedule:

Row #	Price Schedule Details		US \$ per Barrel
